Write-Protect USB Source Creator

WP200TH

The WP200D is a write-protect USB maker that does not need to be connected to a computer and does not require complicated operations or data transfer requirements. With just one click, you can easily create a write-protect USB flash drive to replace the CD-ROMs and protect your data.

Stand-alone operation No Computer required
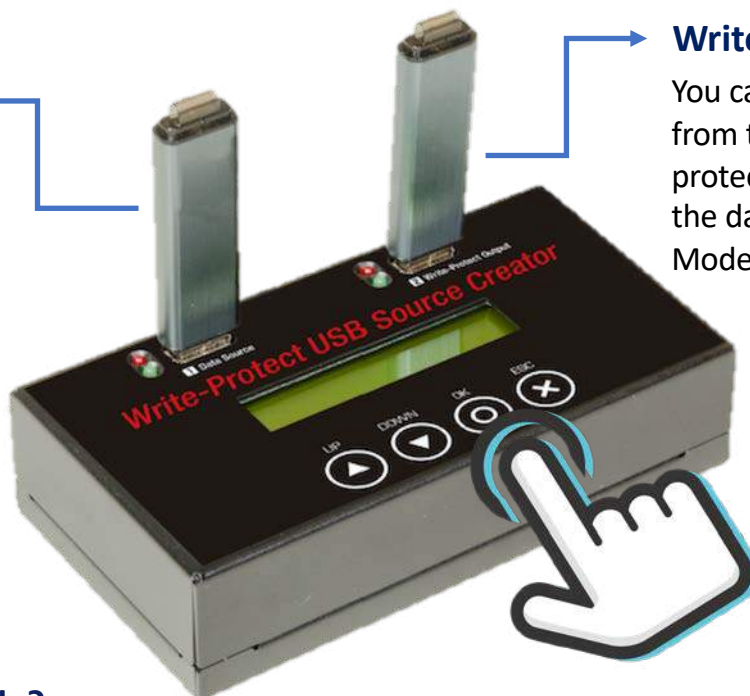

One-click production

Data protection

Support W Mode USBs

Source

You can use a regular FAT-formatted USB flash drive.

Write-Protect Target

You can transfer the data from the source to a write-protect USB stick and make the data undeletable. (A W Mode USB stick is required)

What is W Mode?

W Mode USB is a type of USB flash drive that works with special commands to enable write protection.
W Mode is used to identify whether a USB stick can be used to make write-protect USB sticks when copying.
